

# Cornerstone<sup>®</sup> & Edgestone<sup>™</sup>

## Description

Cornerstone® and Edgestone™ are a specialist cylinder mould watermarking technique that reinforces the edge and corners of a page.

### Threat countered

Unintentional damage, wear & tear, counterfeiting and alteration.

### Benefits to customer

- Helps to prevent splitting, curling, folding, creasing & tearing of the bio-data and observation pages
- Adds robustness and rigidity to high traffic pages of the book
- Can integrate this functionality into the overall design of the watermark
- Cost effective durability
- Simple to adopt and adapt to existing designs

### How it works

The reinforced edges and corners of the sheet are simply more robust and able to stand up to the additional wear and tear typically endured by the bio-data and observations pages as a result of frequent checking, reading and scanning at border control and other authorities.

### Any additional info

- Also used in banknotes
- The design of the Cornerstone® feature can be developed and adapted and incorporated with the watermark design)
